DevOps

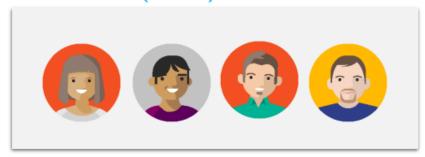

Feature Team (2 Pizza)

Feature Team (2 Pizza)

Feature Team (2 Pizza)

Feature Team (2 Pizza)

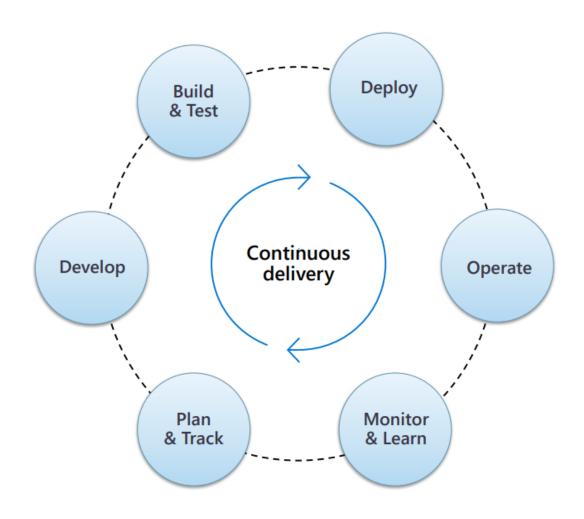

작은 규모의 팀이 신속하고 독립적으로 고객에게 가치를 제공할 수 있는 성과를 달성하는 것

DevOps 란

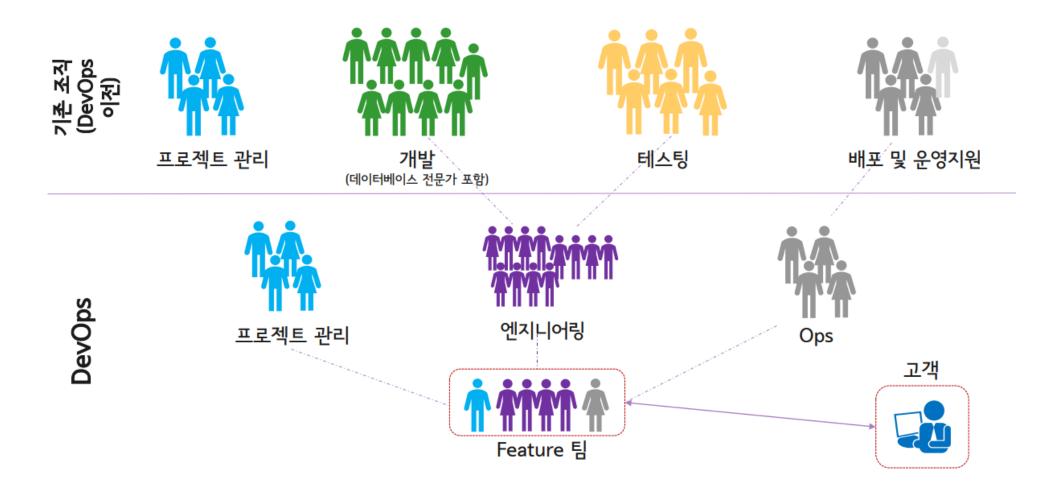

사람. 프로세스. 기술(도구)

DevOps is the union of people, process, and technology to enable continuous delivery of value to your end users.

DevOps를 위한 역할과 책임의 이동

CI / CD

Continuous Integration

지속적인 통합(CI)은 개발 팀이 코드의 개발 및 테스트를 단순화하기 위해 사용하는 실행 방안이다. CI는 개발 초기에 버그나 문제를 파악하는 데 도움이 되며, 이를 통해 쉽고 빠르게 문제점을 해결할 수 있다. 자동화된 테스트와 빌드는 CI 프로세스의 일부로 수행된다. 프로세스는 정해진 일정에 따라 수행되거나 혹은 코드가 push될 때마다 실행된다. CI 시스템의 산출물로는 아티팩트가 생성된다. 아티팩트는 지속적인 딜리버리의 릴리스 파이프라인에서 사용되며, 이를 통해 배포 자동화를 구성할 수 있다.

Continuous Delivery

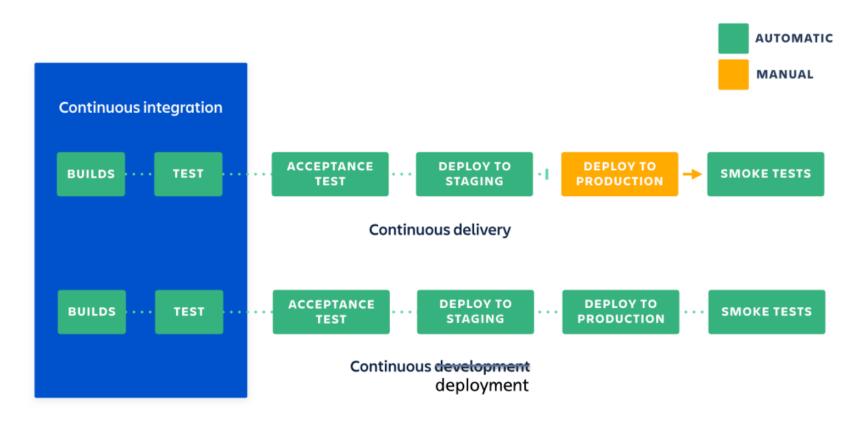

지속적인 딜리버리(CD)는 코드를 하나 이상의 테스트 및 운영 환경에 빌드, 테스트 및 배포하는 프로세스다. 여러 단계로 배포 및 테스트를 실시하면 품질 향상시킬 수 있다. CI 시스템은 인프라와 애플리케이션을 포함하는, 배포 가능한 아티팩트를 생성한다. 자동화된 릴리즈 파이프라인은 이러한 아티팩트를 사용하여 기존 시스템에 새로운 버전과 수정 사항을 릴리즈한다. 모니터링 및 경고 시스템은 지속적으로 실행되어 전체 CD 프로세스에 대한 가시성을 확보한다. 이러한 시스템을 활용하면 에러를 빠르게, 자주 잡을 수 있다.

Azure 프레임워크 상에서의 DevOps

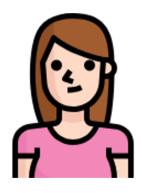

- MLOps: Machine Learning Operations
 - MLOps = ML + Dev + Ops

MLOps의 2개의 축

Data Scientists

- Quick iteration
- Frameworks they understand
- Best of breed tools
- No management headaches
- Unlimited scale

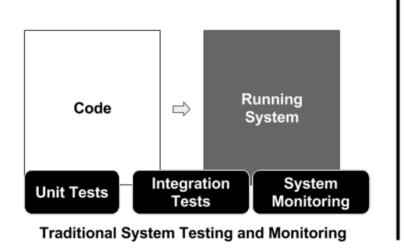

Data/Software Engineers

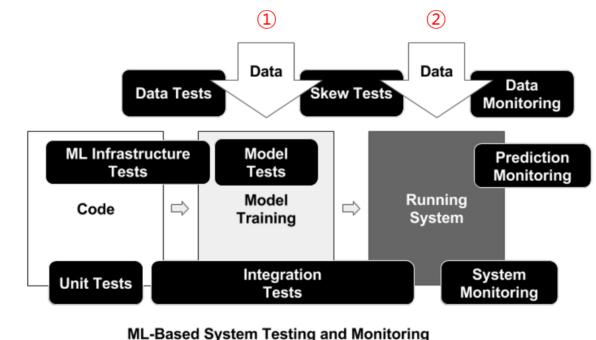

- Reuse of tooling and platforms
- Corporate compliance
- Observability
- Uptime

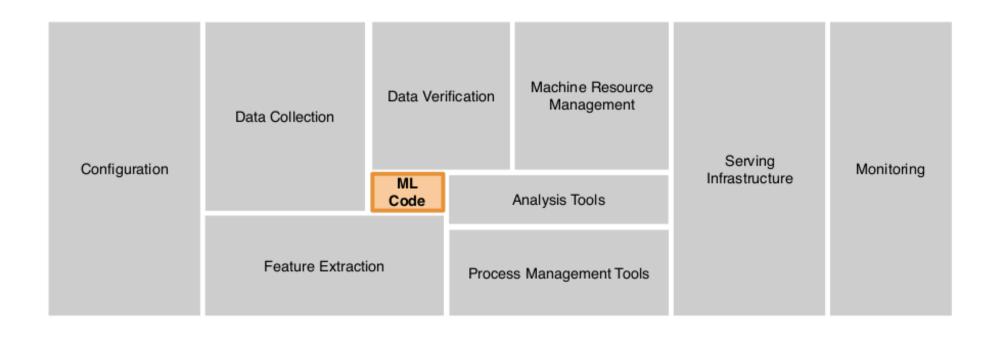

ML 기반 시스템의 테스트와 모니터링

24

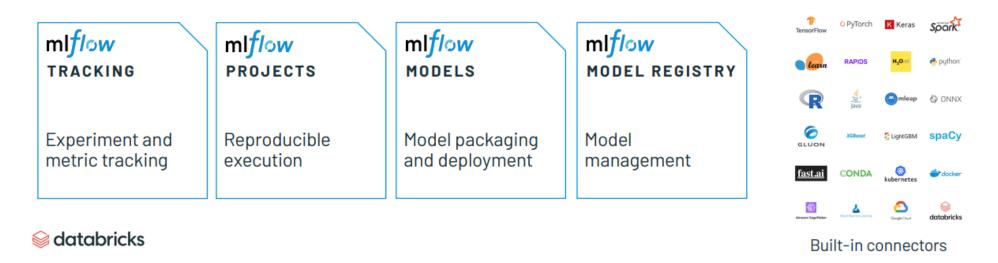

mlflow: An Open Source ML Platform

Based on an **open interface** design philosophy: make it easy to connect arbitrary ML code & tools into the platform

- Simple command-line and REST APIs rather than environment-specific
- Easy to add to existing software

MLflow Tracking

Get visibility into experiments and production runs

```
↑ matei — -bash — 40×13
For n=3, lr=0.9: accuracy=0.79
For n=2, lr=0.1: accuracy=0.71
For n=3, lr=0.2: accuracy=0.79
For n=2, lr=0.5: accuracy=0.83
For n=2, lr=0.9: accuracy=0.79
For n=3, lr=0.1: accuracy=0.71
For n=2, lr=0.2: accuracy=0.79
For n=2, lr=0.5: accuracy=0.83
For n=2, lr=0.9: accuracy=0.79
For n=3, lr=0.1: accuracy=0.83
For n=3 1r=0
       What version of my
          code was this
           result from?
```

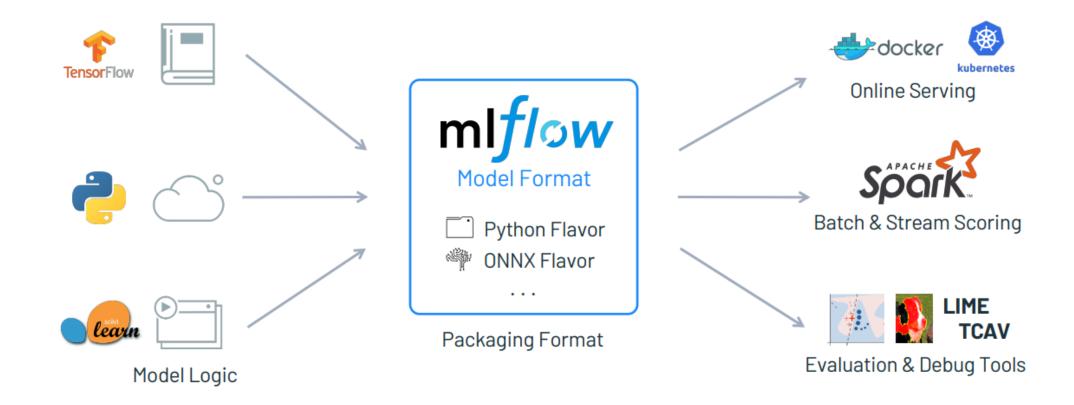

MLflow Projects

Package code + dependencies for reusable workflows

MLflow Models

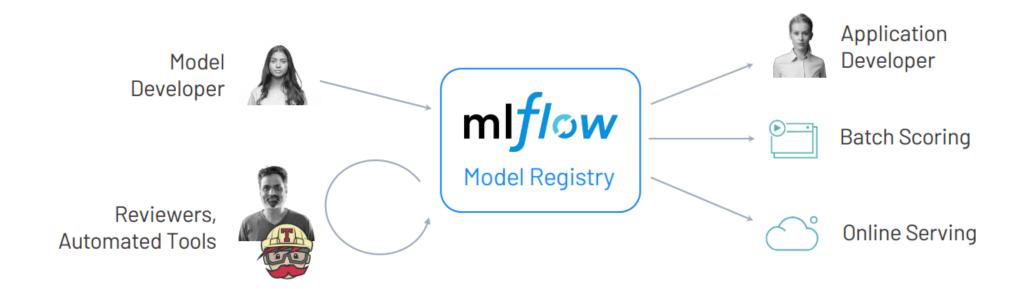

Generic format to package & deploy models from any library

MLflow Model Registry

GitHub-like environment for managing and reviewing models

Tag and Search APIs for Automated CI/CD

Tags to track custom metadata for a model version, e.g. test results

Search API to automate model management and MLOps actions

Any Questions?
